Title : Milk - Determination of Clostridium tyrobutyricum - Semi-quantitative molecular analysis method using LAMP (Loop-mediated isothermal amplification)
Scope : This standard describes a semi-qualitative method for the determination of Clostridium tyrobutyricum using the LAMP (Loop-mediated isothermal amplification) molecular method. The method, in addition to being specific for C. tyrobutyricum, requires much shorter sample preparation and analysis times compared to the traditional method and the quantification of the microorganism's spores within pre-established ranges. The instrumentation used simplifies sample preparation and makes the process standardized and repeatable, as well as making the entire process much faster. Use of lower quantities of solvents, makes this type of determination more environmentally sustainable.

Title : Electric arc furnace slag - Procedure for the preparation of the sample to be subjected to a leaching test according to the UNI EN 12457-2
Scope : The standard defines a procedure for the preparation of the sample to be subjected to a leaching test according to the UNI EN 12457-2, applicable to granular samples of black slag from electric arc furnaces (EAF - Electric Arc Furnace).
 The method applies to black slag from electric arc furnace (EAF) residue from the production of steel from electric arc furnace, and is aimed at ensuring adequate representativeness and repeatability of the leaching test, taking into account the characteristics of the specific material.

Title : Plastics. Expanded polystyrene (EPS) elements for floors with concrete applied in situ
Scope : The purpose of this standard is to establish the classification, designation and specifications of expanded polystyrene (EPS) lightening parts used in concrete floors with ribs poured in situ, both unidirectional and reticular (bidirectional).

This standard is applicable to all types of expanded polystyrene parts obtained by machining blocks or by molding said material, with lightening functions.

For expanded polystyrene pieces used as lightening in floors made with prefabricated joists, EN 15037-4 is applicable.

Title : Installation of windows and doors in walls - Design and execution of the building connection as well as of the joint for windows and/or doors
Scope : This Austrian Standard shall be applied to the design and execution for fitting of windows, door height windows and external doors in conditioned and non-conditioned buildings or building parts being in direct contact to external climate. Furthermore, this Standard also applies to the fitting of windows between conditioned and non-conditioned rooms. This Austrian Standard applies to new construction, rehabilitation as well as to the exchange of windows. The present ÖNORM neither covers repair and/or reconstruction of existing windows. Moreover, the present ÖNORM is not applicable to roof windows, roof lights, etc. For fire protection requirements, the applicability has to be checked for each specific case. This Standard does not deal with connection joints within coupled window constructions; these have to fulfil the requirements of ÖNORM B 5300.

Sector : 07ELDI **Registration Date :** 2024-02-19
Organization : UNE
Country : Spain **Latest Date for Comments :** 2024-03-20
Project ID : P0059850/0001 **Draft for public enquiry**
ICS :
National Ref : PNE 207010
Title : Bar coding application for the coding of electrical energy meters.
Scope : The purpose of this standard is to establish the type of linear or two-dimensional bar code to be used in the marking of metering equipment and its accessories, as well as the characteristics to be encoded and the format and size of the information code. The indications contained in this standard shall be applicable to metering equipment, associated devices and accessories to be installed in Spain for the measurement of electrical energy supplied or generated at supply points of the electrical network.
Specifically, they must be applicable to:

- directly connected and indirectly connected electricity meters;
- seals for meters and electrical metering equipment;
- metering transformers for billing customers in low and medium voltage (voltage less than or equal to 33 kV) or for internal control uses of the distribution network;
- modems and routers for electric energy telemetering;
- data concentrators for smart metering;
- PLC signal filters for smart metering.
- data concentrators for advanced monitoring
- digitizer cards for advanced monitoring
- low voltage output meters for advanced supervision
- neutral voltage watchdog for advanced supervision
- PLC gateways, gateways and PLC base nodes

Title :	Gas plants for civil use - Criteria to check the suitability to safe operation of existing gas plants - Part 1: gas plants for domestic and similar use		
Scope :	This standards defines criteria to check the suitability to safe operation of existing gas plants. The standard only deals with checking criteria of existing plants. It is not to be used as a reference for design and/or installation of new plants or for refurbishment of existing plants. The standards also defines criteria for the repurposing of existing gas plants to the use of blendings of H2 up to 20% in volume and natural gas.

Title : Low voltage electrical cables. Cables with rated voltage 0.6/1 kV. Cables with insulation and thermoplastic polyolefin sheath, with high performance regarding reaction to fire, for fixed command and control installations
Scope : This UNE standard establishes the construction, dimensions and test requirements for unarmoured power cables, with insulation and a thermoplastic polyolefin sheath, for a rated voltage (U) of 1 kV, for use in fixed command and control installations.

The cables described in this UNE standard are suitable for using in fixed installations for the interconnection and governance of all command and control, regulation, measurement, protection, signaling and automation elements. Especially for installations where a low emission of smoke and corrosive gases is required in the event of fire, for example, in public places.

The definition of the performances regarding the reaction to fire of the cables covered by this standard has been made in accordance with Delegated Regulation (EU) 2016/364 of the Commission, of July 1, 2015, relating to the classification of the fire reaction properties of construction products in accordance with Regulation (EU) No 305/2011 of the European Parliament and of the Council.

The cables covered by this standard are:

- Z1Z1-K cables without armor or screen; with flexible copper conductor.
- Z1OZ1-K cables with annealed copper tape screen; with flexible copper conductor.
- Z1C4Z1-K cables with annealed, bare or tinned copper braid screen; with flexible copper conductor.

Title :	Destruction of data carriers - Requirements and compliance indicators for data carriers destruction processes		
Scope :	The modern society we live in relies heavily on data and information that are collected and stored on physical or virtual storage media. These media and the data they handle have a limited lifespan, and it is crucial to apply measurable processes for their destruction to protect and safeguard the data subjects and users to whom the data stored on them belong.		

The aim of this document is to establish the requirements for selecting, sending for destruction, and destroying data media, whether analogue, digital, or virtual. These requirements must comply with national and EU regulatory provisions, with particular attention to the protection of individuals' personal data, the security of non-personal data, and information security and cyber-security. These requirements are designed for use by data media owners and market operators who specialize in media destruction.

The document is compatible with the voluntary standards UNI EN ISO 9001 and UNI CEI EN ISO/IEC 27001, to support organizations that wish to use procedures and methods already in use, thus applying a systemic approach.

 Project ID : 01612761/0001 Project Established
 ICS : 91.010.20, 91.040.30
 National Ref : UNI1612761
 Title : Maintenance - Guidelines, evaluation criteria and parameters that regulate building maintenance processes in structural audits and monitoring plans
 Scope : The document provides a tool for evaluating the times and design parameters necessary to plan and carry out the preventive maintenance of existing industrial, commercial, office and residential real estate assets.
 The document defines a maintenance roadmap starting from the analysis campaigns relating to invasive and non-invasive tests, from the analyzes of structural vulnerabilities and structural designs up to the executive interventions including static and dynamic monitoring plans.
 The document also provides the fundamental parameters that allow the building asset manager to identify the intervention priorities and the definition of "alerts" deriving from a multi-criteria analysis, in order to qualify maintenance as a strategic asset.
