**Subsector :** B01 Registration Date : 2020-07-15  
**Organization :** UNE  
**Country :** Spain Latest Date for Comments : 2020-08-23  
**Project ID :** P0049673/0001 Draft for public enquiry  
**ICS :**  
**National Ref :** PNE 23007-32  
**Title :** Fire detection and fire alarm systems - Part 32: Planning, design, installation, commissioning, use and maintenance of voice alarm system  
**Scope :** This Technical Specification provides guidelines for the planning, design, installation, commissioning, use, maintenance and modification of voice alarm systems in and around buildings that broadcast information for the protection of lives in a fire emergency. See UNE EN 54-1:2011, Figure 1, item C and item M.

These guidelines cover voice alarm systems that are triggered automatically by a fire detection and fire alarm system or that are manually triggered, or both.

This Technical Specification does not apply to fire detection and fire alarm systems that only use voice sounders, bells or sounders or a combination of these.

NOTE 1 The standard UNE 23007-14 provides guidelines for these systems.

This standard does not exclude the use of voice alarm systems for emergency purposes other than fire emergency.

This standard does not exclude the use of voice alarm systems for non-emergency purposes.

**Title :** Cements resistant to alkali-silica reaction with specified alkali content – Classification and composition

**Scope :** The standard is to define the content values of alkali equivalents ( $\text{Na}_2\text{O}_{\text{eq}} = \text{Na}_2\text{O} + 0.658 * \text{K}_2\text{O}$ ) for common cement so that the cements can be used as inhibitors for the expansive reaction that some aggregates, containing particular forms of silica / silicates, may occur. The phenomenon is known as alkalisilica reaction (ASR).

**Title :** Floors. Common regulations. Design and execution  
**Scope :** This standard specifies the requirements for the design, construction and testing of floors in indoor and outdoor environments. The standard distinguishes floors in residential buildings and non-residential buildings and especially in buildings of industrial buildings, so-called

---

industrial floors. The use of industrial floors is not only linked to the use of the building. Floors are divided according to their load. This standard as a whole does not apply to floors for sport purposes or to floors of buildings for animal housing. However, technical principles and design principles that do not contradict the specific requirements of these floors resulting from the particular use, may be used.

**Subsector F12: INFORMATION PROCESSING SYSTEMS**

Subsector : F12 (Secondary Subsector) Registration Date : 2020-07-28  
 Organization : UNI  
 Country : Italy  
 Project ID : 01608363/0001 Project Established  
 ICS : 35.100.05, 35.240.60, 43.080.20, 45.060.01  
 National Ref : UNI1608363  
 Title : Road traffic and transport telematics - Automatic dynamic autonomous debiting systems and automatic access control systems using GNSS/CN - Localization augmentation communication for GNSS/CN systems over UNI 10607 DSRC  
 Scope : On-board units working with satellite positioning to collect data required for charging for the use of roads operate in an autonomous way, i.e. without relying on dedicated road-side infrastructure. However, some situations (e.g. when satellite signals are not perceived), require that positioning information be updated by road stations via dedicated short range communications. This standard defines the types of data and the DSRC exchanges when the communication medium is based on the UNI 10607:2007, Parts 1 to 4.

**Relatedness :**

National : REV/AMD UNI 11411:2011

Subsector : F12 (Secondary Subsector) Registration Date : 2020-07-28  
 Organization : UNI  
 Country : Italy  
 Project ID : 01608364/0001 Project Established  
 ICS : 35.100.05, 35.240.60, 43.080.20, 45.060.01  
 National Ref : UNI1608364  
 Title : Road traffic and transport telematics - Automatic dynamic debiting systems and automatic access control systems using dedicated short-range communication at 5.8 GHz - Compliance checking of GNSS/ CN systems over UNI 10607 DSRC  
 Scope : On-board units working with satellite positioning to collect data required for charging for the use of roads operate in an autonomous way, i.e. without relying on dedicated road-side infrastructure. These OBU may be issued by independent Service Providers directly to users. Toll Chargers have the need to check whether the data regarding road usage they receive are correct. One way of checking the compliance of the data with the rules of the toll regime is to observe a passing vehicle and to interrogate the OBU via a short range communication

with an interrogator at road-side (or in another vehicle). In an interoperable environment it is essential that this interrogation communication is standardised such that every Toll Charger can check all passing OBUs. The standards UNI 10607- 1, UNI 10607-2, UNI 10607-3 and UNI 10607-4 provide the communication media that is used to fulfil this interrogation. This UNI Standard defines requirements for short-range communication based on UNI 10607, data to be exchanged, and related protocol messages for the purpose of compliance checking of autonomous EFC systems.

 Title : Air purity protection -- Determination of propane-1,3-sultone in workplaces by gas chromatography-mass spectrometry (GC-MS)  
 Scope : This standard gives a method for the determination of propane-1,3-sultone (nr CAS: 1120-71-4) in workplace air by gas chromatography-mass spectrometry (GC-MS). The method is applicable during control of the hygienic-sanitary conditions. The lowest concentration of propane-1,3-sultone which can be determined by the method in the sampling and determination conditions specified in the standard is 0,7 µg/m<sup>3</sup> (for air volume 360 l).

 Title : Air purity protection -- Determination of 2-tolylamine in workplaces by high performance liquid chromatography with spectrophotometric detection  
 Scope : This standard gives a method for the determination of 2-tolylamine (nr CAS: 95-53-4) in workplace air by high performance liquid chromatography with spectrophotometric detection. The method is applicable during control of the hygienic-sanitary conditions. The lowest concentration of 2-tolylamine which can be determined by the method in the sampling and determination conditions specified in the standard is 0,05 mg/m<sup>3</sup> (for air volume 36 l).
