Register issued on : 2018-11-07

Subsector A05: MAINTENANCE SERVICES

Subsector : A05 **Registration Date :** 2018-10-30
Organization : UNI
Country : Italy
Project ID : 01605101/0001 **Project**
Established
ICS : 03.100.01
National Ref : UNI1605101
Title : Maintenance - Maintenance within physical asset design
Scope : This standard specifies principles, criteria, methodologies and procedures, as well as informative elements and indicators relating to maintenance.
They are to be considered and included in the design process of a physical asset in order to ensure over the life cycle the characteristics, levels of performance and lifetime expected, as posted in the general terms and conditions of contract and related technical specifications.

Subsector B25: GAS DISTRIBUTION INSTALLATION AND RELATED EQUIPMENT

Subsector : B25 **Registration Date :** 2018-10-30
Organization : UNI
Country : Italy

Project ID : 01605148/0001 Project Established
ICS : 27.100, 91.140.10
National Ref : UNI1605148
Title : Burning systems equipped with forced draught gas burners of nominal heat input greater than 35 kW - Inspection and maintenance
Scope : This standard provides operations to be carried out, according to the instructions given by the manufacturer of the appliances and components, on the combustion plants equipped with gas forced burners in order to guarantee safety and efficiency under normal working conditions.
 It gives recommendations for:
 - maintenance of plants
 - check of the occurred maintenance and the performance level of the plant towards the safety and the rational use of the energy
 It applies to the combustion plants intended for the ambient heating and/or domestic hot water production, equipped of automatic forced gas burners, including mixed and combined ones (as referred to the gas) having heat input greater than 35 kw.
 The standard does not cover plants for industrial production processes.

Title : Gas meters with metering pressure not greater than 0,07 bar – Criteria for verification
Scope : This standard defines:
 a) the requirements to carry out verification of the meter in the laboratory and at the end user;
 b) the technical operational procedure to be applied to carry out verification of the meter and the method of calculating the measurement error;
 c) the characteristics of the measuring equipment necessary to carry out the verification;
 d) the procedure for removal and transport to the laboratory;
 e) the requirements of laboratories where the verification of the meter is carried out.
 It applies to all meters for measuring gas of the second and third family, performing the measurement at a pressure not greater, respectively of 0.04 bar (4 kPa) for natural gas, and 0.07 bar (7 kPa) for mixtures of LPG

Title : Standard Practice for Determining Volatile Organic Compound (VOC) Content of Paints and Related Coatings
Scope : This practice measures the volatile organic compound (VOC) content of solventborne and waterborne paints and related coatings as determined from the quantity of material released from a sample under specified bake conditions and subtracting exempt volatile compounds and water if present.
 Note 1: The regulatory definition, under the control of the U.S. EPA, can change. To ensure currency, contact the local air pollution control agency.
 This practice provides a guide to the selection of appropriate ASTM test methods for the determination of VOC content.
 Certain organic compounds that may be released under the specified bake conditions are not counted toward coating VOC content because they do not participate appreciably in atmospheric photochemical reactions. Such negligibly photochemically reactive compounds are referred to, as exempt volatile compounds in this practice.
 Note 2: Information on the US EPA definition of VOC and a list of the current US EPA approved exempt volatile compounds which have been used in coatings, are provided in Appendix X3.
 VOC content is calculated as a function of (1) the volume of coating less water and exempt volatile compounds, and (2) the volume of coating solids, and (3) the weight of coating solids.

Title : Health services. Quality management systems for the clinical and dietetic nutrition units in adults
Scope : This standard specifies the requirements for the establishment of a quality management system applicable to the Clinical and Dietetic Nutrition Units (CDNU).

The scope of the standard encompasses the processes involved in the following aspects:

- a) Nutritional Risk Screening;
- b) Management of consultations to the CDNU;
- c) Nutritional Assessment;
- d) Nutritional diagnosis and coding;
- e) Estimation / calculation of total energy expenditure;
- f) Prescription of nutritional treatment:
 - 1. oral diet,
 - 2. oral nutritional supplements,
 - 3. enteral nutrition,
 - 4. parenteral nutrition;
- g) Monitoring of the nutritional status and treatment;
- h) Management of home artificial nutrition;
- i) Health education and training on care and nutritional treatment.

If the CDNU considers appropriate, it can add to the scope:

- j) Teaching;
- k) Research

Title : Hard coal, coke and semi-coke of hard coal and char -- Determination of moisture -- Simplified methods
Scope : The standard defines the basic methods for the determination of various types of moisture in the sample of the solid fuels - coal, brown coal, coke, semi-coke and char. The standard contains the description of the methods Determination of the transient moisture content in hard coal
 Determination of the total moisture content:
 - two-step determination of the total moisture content in a hard coal
 - one-step determination of the total moisture content in a hard coal with use of a dryer
 - one-step determination of the total moisture content in a coal according to a distillation method
 - determination of the total moisture content in a coke and semi-coke from a hard coal
 - determination of the total moisture content in a char
 Determination of the total moisture content in the air-dried sample
 - determination of the total moisture content in the air-dried sample of a coal
 - determination of the total moisture content in the air-dried sample of a coke and semi-coke from a hard coal

Title : Mining shafts -- Shaft linings -- Assessment criteria and test methods

Scope : The scope of the standard has been extended to include the most common shaft lining type ie concrete / reinforced concrete, tubing, brick, wooden and special (panel, steel-shell). Methods for testing the above-mentioned lining types, requirements for their use, as well as requirements for the equipment for testing have been described. The method of conducting tests at the facility and in the laboratory was determined. Criteria for assessing the technical condition of the lining have been established, taking into account the specificity of its construction.

Title : Petroleum products – Determination of dynamic viscosity and density of liquids using Stabinger viscometer and calculation of kinematic viscosity of base oils, lubricating oils and heating oils
Scope : This standard specifies the method for simultaneous measurement of the dynamic viscosity and density of base oils, lubricating oils and heating oils in the temperature range from - 60 °C to 135 °C, in the dynamic viscosity range from 6,2 mm²/s to 20,000 mm²/s and density from 0,60 g/cm³ to 3,0 g/cm³. The kinematic viscosity is calculated automatically from the relationship between the density and dynamic viscosity values determined at the same temperature. The result obtained using this test method depends on the behavior of the sample and the method is intended for use in liquids for which the shear stress and shear rate are proportional (Newtonian liquids). However, when the viscosity varies significantly with the change in shear rate, comparison of the present determination method with other measurement methods is only allowed for similar shear rate values.

Subsector N06: RUBBER

Subsector :	N06	Registration Date :	2018-10-29
Organization :	ISS		
Country :	Serbia	Latest Date for Comments :	2018-12-30
Project ID :	00063998/0001		Draft for public enquiry
ICS :	49.025.40		
National Ref :	naSRPS G.C0.014:2018		
Title :	Specification for packaging and identification of vulcanized rubber items		
Scope :	1.1 This British Standard specifies the requirements for the packaging and identification when packaged of vulcanized rubber materials, components and assemblies containing rubber components used for aerospace purposes unless amended by other contractual requirements. 1.2 The packaging specified not only ensures adequate identification of the components, but also forms an integral part of the controlled storage and inspection procedure (see British Standard F 68).

Title :	Controlled storage of vulcanized rubbers for use in aerospace applications		
Scope :	1.1 This British Standard specifies requirements for the storage, and inspection during storage, of vulcanized rubber, whether in the form of materials or as components to be used for aerospace purposes. These requirements also apply to items made from cellular rubber. 1.2 The requirements of this standard do not apply to rubber components contained within mechanical assemblies, e.g. pumps and valves. NOTE In such cases the recommendations of the assembly supplier for exercising the assembly and lifing of the rubber need to be sought and applied. 1.3 The storage periods quoted apply only if the storage conditions specified in Annex A are complied with and if the packaging complies from the date of cure with the requirements of BS F 69, as far as is practicable, making allowance for subsequent manufacturing operations. 1.4 The storage period comprises the whole period of existence of the rubber from the date of cure. This period will generally be divided between manufacturing (including assembly) and storage (e.g. in manufacture, by stockists, by aircraft constructors and operators) and the division of this period should be mutually agreed between the interested parties. 1.5 These requirements are based on the classification of rubbers into groups as defined in Clause 3.
